

TABBLES® THINKS OUT OF THE FOLDER

Tabbles introduces a new way to categorize and find all your files, folders and bookmarks.

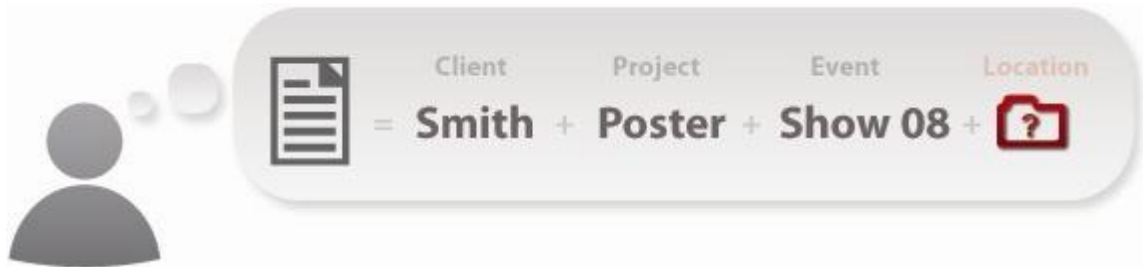

The **tablets** are special containers that go beyond folders: they can be used to describe your files, folders and bookmarks. You can add as many tablets as you want to your files, folders or bookmarks. Using Tabbles you will quickly categorize, find, sort and share your files, in a totally new way. Finding files and sorting them won't be a problem anymore.

Categorize and find

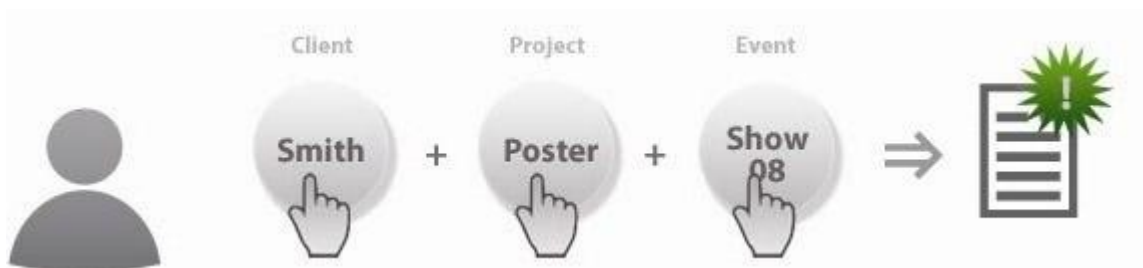

You don't know where that file is, but you can still describe it.

Even the most organized people do often have troubles finding sensible files. Even the simplest folder structures and file naming system can be hard to remember or to understand. Our brains are simply not that efficient when it comes to remembering files' locations and names, even if **we easily remember enough to describe the files we are looking for.**

Very often you remember a lot about a file, but you don't know where it is.

Very often the only way to find a file is by searching for its name or its folder's name..which you will hardly remember. You'll need to spend time browsing, or asking someone else for help. Searching for a file can be time consuming, frustrating and maybe you won't even find what you're looking for...but still you remember a lot about the file, don't you?

Tabbles allows you to find your files and bookmarks by simply describing them in a natural and easy way.

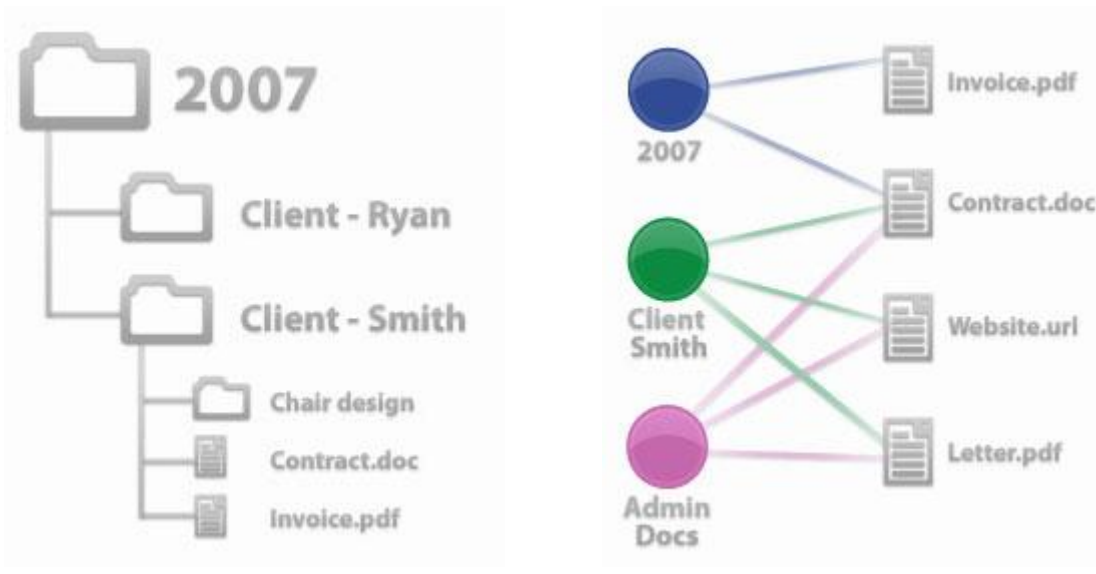

Using to the Combine© function, you can find the files you are looking for by picking the attributes that best describe your files in a graphical and user-friendly way. Tabbles© will then show you all the files that match your description independently on where the files are located in the disks and folders.

During the search **Tabbles© will suggest you how refine the search**, leading you to the files you're looking for in a natural way.

Sort

Your docs are all sorted by year. What if you need to have them sorted by customer name or by project type?

Tabbles allows you to instantly sort or group your files independently from the folder structure. Sorting is performed on the basis of the attributes given to each file - which in turn means that you can group and sort files by clicking on the tabbles that best describe them.

Folder categorization in a hierarchical system.

Tabbles' non-hierarchical and cross linked structure.

Modern operative systems store and arrange files in a hierarchical system similar to "Chinese boxes". Each folder and file can be located inside only one folder. Once the folder structure is defined it will remain rigid and all files must then be sorted and searched according to the given scheme. **And no hierarchical scheme fits all situations nor will it work over long periods of time.**

Tabbles© **frees you from the hierarchical structure** of the file system: it allows you to categorize, find and interact with files located far away from each other in different disks and folders, sorting and grouping them accordingly to their characteristics. All of this is achieved using a lightning-fast, friendly and natural user interface. Using Tabbles© **you will forget about the question "where should I put this file?"**

Cross-linking in Tabbles: files, folders and internet addresses are displayed surrounded by the tabbles they are linked to. A tag-like visualization and a gallery mode are also available.

Avoid duplicates

This .doc is in this customer's folder. Did I use it in other projects? Are there other copies of it?

Using Tabbles© you can link your files and bookmark to several projects, (or customers, or... you name it), without copying or moving them. The hierarchical folder system forces you to put each file in one and only folder forcing you to rigidly link the file to the folder containing it. Very often you need to use the same files in different situations with little or no change: this results typically in having many copies of the same file scattered around your hard-drive. **Tabbles© will help you with:**

- **Redundant files and duplicates:** you won't need to worry anymore about finding out if and where a copy of that given file was being used. Nor you will need to clean up folders from redundant copies anymore, because you won't need to copy or move your files around anymore.
- **Inconsistencies:** whenever you'll need the same file in several different projects, using Tabbles© you won't need to create and modify copies of the same file.
- **File management workload:** as your disk will be cleaner from copies, the need to "clean up your hard drive" will be considerably reduced, if not eliminated. As a lot of the file management is done to organize your files and folders, using Tabbles you will forget about this.
- **Disk space:** fewer files copied and less "mess" in your hard-drive will necessarily mean having using less space on your hard-drive.

Shortly:

Tabbles© allows add the same file to as many tabbles as you want, in the same way you would put a file into a folder (copy-paste, drag&drop, browsing the disk...). You can then browse the **files connected to each table** and at same time you'll be able to **see the tabbles that are connect to the files** you're looking at. But there is more: using the Combine© function you can select several tabbles and visualize all the files connected to all of them. While you're looking at a group of files, you can still **refine your browsing dynamically**. Watch the video here to have an idea on how this works in reality.

Selected features and tech highlights

Advanced DMS features

- **Lightning fast non hierarchical file sorting:** get cross-section of folder structures as to find all the files related to a certain customer during a certain a number of years.
- **Persistent graphical tags:** tabbles have different colors, shapes and look and can be searched visually. The tabbles can be sorted in different ways, and can be managed efficiently.

Exclusive features

- **The Combine© function:** use the Combine function to find your files according to what you remember of them and refine your searches dynamically using the suggestions of Tabbles©.
- **Horizontal browsing:** navigate freely between files and tabbles based on the connection among them, as in a web of files and the concept the connect to.
- **Dynamical and incremental cross-linking of files:** don't worry anymore about the structure of your folders – add your files to as many tabbles as you want and use the Combine© function find the files you need.
- **Auto-tagging using Smart tabbles:** not all the categorizing has to be done manually. Tell Smart Tabbles© what they need to look for and they will categorize your files for you.
- **Copy & paste, drag & drop and more:** being a desktop application, with Tabbles© you can enjoy full integration with Windows Explorer, including keyboard shortcuts, copy&paste, drag&drop and the Explorer extension for your installed applications.
- **Spatial view, categories, alphabetical or sidebar:** Tabbles© goes beyond the grid visualization common to management files. Your tabbles can be showed and sorted in different flavors, depending on your habits and your needs.
- **Easy installation and offline work:** Tabbles© user friendliness starts from the installation – no database server is required. Being a full desktop based application, all you need to do is run the installer and use it. Tabbles© doesn't require to be online or connected to your office network: everything it needs to work is built in it.

Tech highlights

- **WPF and F#:** Tabbles© is developed using the latest Microsoft .net technologies, allowing to achieve unprecedented graphics and reliability.
- **Custom database and XML import/export:** the software is runs on top of a custom designed database. XML importing and exporting of data from and to the database is used in different situations during the software daily use and can as well be exploited

to create customizable distributable installers Tabbles in order to accommodate specific partners needs.

- **ZUI and vector graphics:** Tabbles© features a fully zoom-able user interface, and each item in the UI is designed using vector graphics.
- **Direct manipulation and discoverability:** using extensive use of custom WPF controls, Tabbles© features a high discoverability of the software functions. The program provides hints to the user depending on users operations and allows to manipulate objects directly.

Tabbles is built with customization in mind

Tabbles is designed to be highly customized: our partners have the chance to offer a unique solution to their customer, with little or no effort.

Being the result of a long experience in the software industry and the industrial filed, Tabbles is developed with customization in mind. Partners and user can easily customize both the database structure and the look and feel and Tabbles by editing an simple and well documented xml file or by using the functions built-in the software.

Some examples on what the customization can bring:

- **Database structure customization:** deliver Tabbles to your customers with a database structure that fits their needs while keeping an eye on your competitive advantage. Build in smart tabbles recognizing specific file extensions, or product specific jobs or tasks.
- **Have Tabbles fitting your corporate image:** Tabbles graphics are highly customizable and you can fit your brands graphics and colors into Tabbles within minutes. Once you define the setup, we'll take care on delivering your customized Tabbles to your customers only.
- **Deliver files or links along with Tabbles:** the customizable database structure allows you to include a set of predefined files. The files can include promotional material, link to websites and will be installed together with the software to your customers exclusively.
- **We will deliver you exactly what you need:** being function rich and graphically appealing, Tabbles fits perfectly as bundled product. We will be happy of providing you a feature-limited version should you require for to satisfy niche-requirements.
